ABSTRACTED-PUB-NO: CN 1268283A:

BASIC-ABSTRACT:

NOVELTY - The present invention relates to a plant fiber seedling bowl and its making method. Said bowl is made of (by wt. portion) plant fiber (100), binder (50-60) and mold-release agent (7.5-8); the plant fiber is at least one kind of straw, bran, reed, cogongrass, bamboo and wood, the binder may be grain starch, and the mold-release agent may be paraffin wax or rapeseed oil, and they pass through grinding mixing, moistening and mold pressing to form into the product.

USE - As plant fibre pot for seedling.

ADVANTAGE - The advantages include widely spread raw materials,

little water  
used, low cost, easy to release from mold, and the bowl body can  
degrade by  
itself as organic fertilizer for soil.
